

JONATHAN®

WASH AND CARE

Taking care of Jonathan products is easy. With these instructions they will stay in proper condition for longer.

Washing is not always necessary; you can wipe the garment clean or spray the dirt off with water. When needed, garments can be machine-washed in 40 degrees turned inside out.

Using higher than 40 degrees washing temperature may reduce the water resistance as well as breathability of the garment. Use detergent that contains no bleach and do not use fabric softener. Fabric softener reduces the breathability as it blocks the micro pores in fabric. Jonathan garments will dry quickly at room temperature. Jonathan waterproof and water repellent garments should not be tumble-dried, cabin-dried or dried over a heater.
